# Gap Assessment Report

ISO/IEC 27001:2022 Information Security Management System

## Harbour Logistics (sample)

Information security for the head office, the two regional warehouses and the customer order platform.

# Where Harbour Logistics (sample) stands against ISO 27001

## WHAT THIS ASSESSMENT TELLS YOU

- Overall readiness is 55.0% against ISO 27001 across 115 applicable controls. 20 of them are implemented and evidenced.
- Most open gaps: A.5 - Organizational controls, with 33 at 46%. Strongest area: Clause 5 - Leadership at 92%.
- 3 management-system clauses score under half: Clause 6 - Planning (40%); Clause 9 - Performance evaluation (25%); Clause 10 - Improvement (25%). Clauses cannot be excluded, and each is a likely major nonconformity at a certification audit.
- 28 controls are operating but not evidenced. Collecting their records alone lifts the score to 61.1% (+6.1 points), the cheapest gain available.
- 34 gaps are high priority (not started or only planned); 15 of them are in A.5 - Organizational controls.
- 3 controls were left unanswered and are excluded from the score, which will move when they are completed.

## DO THESE FIRST

|   | PRIORITY | ACTION                                                                                                                                                   | OWNER           | START FROM                         |
|---|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|------------------------------------|
| 1 | HIGH     | Bring every management-system clause above 50%, starting with 6.1.2 Information security risk assessment; 9.2 Internal audit; 10.1 Continual improvement | Compliance Lead | ISMS Risk Assessment and Treatment |
| 2 | HIGH     | Put an owner and date against the 15 high-priority gaps in A.5 - Organizational controls                                                                 | Compliance Lead | Threat Intelligence Policy         |
| 3 | MEDIUM   | Adopt and tailor the Access Control Policy, which closes 7 open gaps                                                                                     | To assign       | Access Control Policy              |

# Analysis and priorities

## IN ONE SENTENCE

**At 55% and Level 2, the ISMS is under way but not yet auditable; start internal audit and finish the risk process first.**

AI-assisted analysis, generated from the information the organization provided and checked automatically against the scores and findings in this report. It supports planning and is not an audit opinion; see "Basis of this report and limitation of liability".

## FOR SENIOR MANAGEMENT AND THE BOARD

Our information security programme is at Level 2 of 4, Developing, with a score of 55%. Day-to-day controls are partly in place, but the parts that prove they work, such as risk assessment, internal audit and management review, are largely missing. The main exposure is access control and supplier security. We need a named programme owner, time from department heads, and agreement to complete the risk assessment and first internal audit before seeking certification.

## WHERE YOU STAND

The organization is at Level 2, Developing, with a readiness score of 55% across 115 applicable requirements. 20 requirements are implemented and evidenced, but 95 remain open and 34 of those are high priority. The management system clauses are uneven: leadership scores well at 91.7%, while planning sits at 40% and performance evaluation and improvement at 25%. That pattern usually means controls exist in practice but the system that plans, checks and improves them has not been built yet.

## WHAT IT MEANS FOR THE ORGANIZATION

For a logistics business of 50 to 249 people, the practical consequence is that customers and partners asking for assurance will find gaps in exactly the areas they test first: risk assessment, internal audit and management review. Organizational controls are the largest pool of work, with 33 open gaps at 45.9%, followed by technological controls with 24 open gaps at 54%. Access control, supplier security and monitoring are where a real incident would expose the weakest links.

## WHERE TO FOCUS FIRST

The fastest improvement comes from evidencing what already runs, which lifts the score to 61.1%, and from finishing what is partly in place, which takes it to 75.4%. Owners are named for 48 gaps but only 27 have a target date, so the first job is turning this list into a dated plan.

## PRIORITIES

| PRIORITY                                                                                                                                                                              | WHY IT MATTERS                                                                                                                                         | FIRST STEP                                                                                                | START FROM                                                                                            | WITHIN         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|----------------|
| <b>1 Complete the information security risk assessment and treatment</b><br>6.1.2 Information security risk assessment · 6.1.3 Information security risk treatment                    | Every other control decision depends on the risk assessment; without it, spending cannot be justified and an auditor will raise a major nonconformity. | Hold a two-hour workshop with operations, IT and finance to list assets and threats in the risk register. | ISMS Risk Assessment and Treatment<br><a href="#">ISO 27001 Toolkit - 165 Comprehensive Templates</a> | <b>30 DAYS</b> |
| <b>2 Plan and run the first internal audit</b><br>9.2 Internal audit                                                                                                                  | Internal audit has not started, so nobody independent has checked whether controls work before a customer or certification body does.                  | Appoint an internal auditor who does not own any of the controls and agree the audit scope.               | ISMS Internal Audit Procedure<br><a href="#">ISO 27001 Toolkit - 165 Comprehensive Templates</a>      | <b>60 DAYS</b> |
| <b>3 Put access control and authentication on a written footing</b><br>A.5.15 Access control · A.5.17 Authentication information                                                      | Access control has not started, which is the most common route for account misuse and the first thing customers ask about.                             | Export the user list for the order platform and warehouse systems and remove leavers this week.           | Access Control Policy<br><a href="#">ISO 27001 Toolkit - 165 Comprehensive Templates</a>              | <b>30 DAYS</b> |
| <b>4 Bring key suppliers under security terms</b><br>A.5.20 Addressing information security within supplier agreements · A.5.21 Managing information security in the ICT supply chain | Supplier security is only planned, so a courier or software vendor could introduce a weakness you have no contractual lever to fix.                    | List the five suppliers with access to your systems or data and check their current contract terms.       | Vendor Security Agreement                                                                             | <b>60 DAYS</b> |
| <b>5 Hold a management review and log improvements</b><br>9.3 Management review · 10.1 Continual improvement                                                                          | Management review is planned but not held, so leadership has no regular point to decide on risks, resources and results.                               | Book the first management review meeting for next month and circulate the agenda.                         | ISMS Management Review Meeting Agenda                                                                 | <b>90 DAYS</b> |

## 30 / 60 / 90-DAY ROADMAP

## FIRST 30 DAYS

- Name a programme owner and confirm the scope with leadership
- Run the risk workshop and populate the risk register
- Remove leaver accounts and publish the access control policy

## DAYS 31 TO 60

- Approve the risk treatment plan and Statement of Applicability
- Agree security terms with the five key suppliers
- Complete the first internal audit of the management system clauses

## DAYS 61 TO 90

- Hold the first management review and record decisions
- Start collecting evidence for controls that already operate
- Re-run this assessment to measure progress

## Maturity across the standard

Each bar shows how the requirements in one area break down by status, weakest on the left. The score is the average across applicable requirements; the chips count open gaps by priority.

| MANAGEMENT SYSTEM CLAUSES         | STATUS MIX                                                  | SCORE | GAPS H · M · L                                  |

### DOCUMENTS THAT CLOSE THE MOST GAPS

Each bar counts the open gaps that name the document as the way to close them.

|                                 |                                   |   |
|---------------------------------|-----------------------------------|---|
| Access Control Policy           | <div><div></div><div></div></div> | 7 |
| Incident Response Procedure     | <div><div></div><div></div></div> | 6 |
| IT Systems Monitoring Procedure | <div><div></div><div></div></div> | 5 |
| Security Incident Procedure     | <div><div></div><div></div></div> | 5 |
| ISMS Management Plan            | <div><div></div><div></div></div> | 4 |
| ISMS Risk Treatment Plan        | <div><div></div><div></div></div> | 4 |

All of these are in the ISO 27001 Toolkit (175 documents).

## Every open gap, grouped by what has to happen next

Work from the top. Requirements not yet started or only planned are the ones a certification auditor reaches first; the last group already operates and needs only its records.

ANSWER **Not answered · 3**

Left blank, so not in the score yet. Answer these in the workbook or online; the score will move when you do.

| Ref           | Requirement                                                 | Area | Question to answer                                                                                                                    |
|---------------|-------------------------------------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.8.31</b> | Separation of development, test and production environments | A.8  | Are development, testing and production environments separated and secured?                                                           |
| <b>A.8.33</b> | Test information                                            | A.8  | Is test information appropriately selected, protected and managed?                                                                    |
| <b>A.8.34</b> | Protection of information systems during audit testing      | A.8  | Are audit tests and other assurance activities involving assessment of operational systems planned and agreed to minimise disruption? |

# How it was scored

## STATUS WEIGHTS

| Status                       | Weight | Meaning                                                                   |
|------------------------------|--------|---------------------------------------------------------------------------|
| ■ Not started                | 0.00   | No policy, process or activity exists for this requirement.               |
| ■ Planned                    | 0.25   | Approach agreed and scheduled, but nothing is in place yet.               |
| ■ Partially implemented      | 0.50   | In place for part of the scope, or inconsistently applied.                |
| ■ Implemented, not evidenced | 0.75   | Operating as intended, but you could not prove it to an auditor today.    |
| ■ Implemented and evidenced  | 1.00   | Operating as intended, with records an auditor can sample.                |
| ■ Not applicable             | —      | A justified exclusion. Removed from the score - record why in your notes. |

## READINESS LEVELS

### 1 • Initial (0%+)

Most requirements are not yet in place. Build the foundations before thinking about an audit.

### 2 • Developing (40%+)

The programme is under way, with material gaps an auditor would find.

### 3 • Established (65%+)

Most controls operate. Remaining work is closing specific gaps and evidencing what runs.

### 4 • Audit-ready (85%+)

Controls operate and are evidenced. Ready for an internal audit and a certification body.

A management-system clause scoring under 50% holds the level at Developing, because clauses cannot be excluded from certification scope.

## WHAT THIS REPORT IS

### BASIS OF THIS REPORT AND LIMITATION OF LIABILITY

This report is the output of a self-assessment. The scores, readiness levels, gaps, analysis and recommendations in this report are derived solely from the information entered by the organization, and have not been independently reviewed, verified, tested or audited by Governance Docs. Governance Docs did not conduct an independent assessment of the organization, its controls or its operations.

The accuracy and completeness of the results depend entirely on the accuracy and completeness of the information provided. Governance Docs gives no assurance, certification or audit opinion, and accepts no liability for any inaccuracy, omission or deviation arising from that information, or for any decision taken, or not taken, in reliance on this report.

The report, including any AI-assisted analysis, is provided for guidance and planning only. It does not constitute legal, regulatory or other professional advice, and it does not replace an independent assessment or a certification audit.

A control that is running but cannot be evidenced scores 0.75, not 1.00. Auditors sample records, not intentions. Closing that distance is usually the fastest route to a higher score.

All assessment questions and guidance are original wording by Governance Docs. Clause and control references are used as identifiers; no text from the standard is reproduced. You need your own licensed copy of the standard to implement it.

## YOUR WORKBOOK

The Excel workbook that comes with this report follows the same sections and colours. Dashboard: sections 1 and 2, recalculated live. Assessment: every requirement; change a status and every score, chart and level updates. Remediation Plan: section 3, with owners, dates and progress since this report. How it was scored: this page.
